

Date: _____

Shelter Name: _____

Agent Name: _____

- ASPCA® Veterinary Services of North Carolina, P.C. (AVSNC) recommends surgery be performed regardless of test results, in keeping with the position statement of the American Association of Feline Practitioners: “Retrovirus positive cats should be spayed or neutered, housed indoors, and should avoid raw food diets.”
- AVSNC will obtain blood and run the test during the course of surgical preparation and surgery.
- Shelters may opt for surgery to not be performed, based upon test results. These cats will be anesthetized prior to a blood draw, and will be shaved in preparation for surgery, but surgery will be delayed until a test result is obtained.
- In the event that a shelter selects this option, and the cat tests positive, a \$15 anesthetic induction fee will be charged, along with the test charge. Additionally, if a positive result is obtained, follow-up testing is ALWAYS recommended to confirm results.

I, acting as owner or agent of the animal named above, hereby request and authorize ASPCA® Veterinary Services of North Carolina, P.C., through whichever veterinarians or assistants they may designate, to perform an FeLV/FIV test on the animal listed above.

Proceed with surgery regardless of test results

Do not perform surgery if test is positive
